**DETAILED ACTION**

***Response to Amendment***

The amendment filed on August 12, 2008, has been entered and acknowledged by the Examiner.

Claims 1-9 and 24-28 are pending in the instant application.

***Allowable Subject Matter***

Claims 1-9 and 24-28 are allowed.

Regarding independent claim 1, the references of the Prior Art of record fail to teach or suggest the combination of the limitations as set forth in claim 1, and specifically comprising the limitation wherein an organic electroluminescent display device comprises a substrate, a lower electrode formed on the substrate, the lower electrode having a planar upper surface at a first step difference above the substrate, a pixel define layer formed on the substrate and covering one portion of the lower electrode while exposing another portion of the lower electrode, the portion of the pixel define layer that covers the one portion of the lower electrode, having a planar upper surface at a second step difference above the substrate, an organic thin film layer formed on the lower electrode, and an upper electrode formed on the organic thin film layer, wherein the second step difference of the pixel define layer is not greater than the first step difference of the lower electrode.

Regarding claims 2-9 and 24, claims 2-9 and 24 are allowable for the reasons given in claim 1 because of their dependency status from claim 1.

Regarding independent claim 25, the references of the Prior Art of record fail to teach or suggest the combination of the limitations as set forth in claim 25, and specifically comprising the limitation wherein an organic electroluminescent display device comprises a substrate, a lower electrode formed on the substrate, the lower electrode having a substantially planar upper surface at a first step difference above the substrate, a pixel define layer formed on the substrate and covering one portion of the lower electrode while exposing another portion of the lower electrode, the pixel define layer having an upper surface at a second step difference above the substrate, an organic thin film layer formed on the organic thin film layer, and a buffer pattern between the lower electrode and the substrate and which has a predetermined thickness sufficient to reduce a difference between the first and second step differences, wherein the second step difference of the pixel define layer is less than or substantially equal to the first step difference of the lower electrode.

Regarding claims 26-28, claims 26-28 are allowable for the reasons given in claim 25 because of their dependency status from claim 25.
